A developer with endless curiosity, passionate about always learning, constantly picking up knowledge from the community and their professional world.

WORK EXPERIENCE

2025 - Present

Software Backend Engineer - Asociación Cibao de Ahorros y Préstamos

Participated in the development and implementation of financial product digitalization solutions, including savings accounts and loans, using NestJS to build scalable RESTful APIs. Worked in agile environments and managed the development lifecycle through Azure DevOps, covering version control, CI/CD pipelines, and task tracking, contributing to the modernization of core banking processes.

2021 - Present

Software Engineer - Ministry of Finance, Dominican Republic

Developed a new software as backend software engineer using Java/Spring-Boot, also front-end programmer using the Vue 3 JavaScript framework, managing dependencies with npm, and integrating with APIs.

2025 - 2025

Senior Software Engineer - Beesion (United States of America)

Responsible for maintaining and developing new modules in a Java development ecosystem, working with microservices and event-driven architecture using Apache Kafka, as well as handling version upgrades and application versioning.

2024 - 2025

Senior Software Engineer - MAYBLUE (Madrid, Spain)

Responsible for maintaining, developing, and updating software projects, providing code solutions as a Linux user, applying best practices in Java, managing dependencies with Maven, and working with Oracle technologies.
